Aluminum Finishes

ALUMINUM

Aluminum is the most abundant metal in the Earth's crust. It represents about 8% by weight of the Earth's solid surface. It is extracted from bauxite and, being a metal, it doesn't absorb humidity. **Aluminum immediately oxidizes when in contact with air and forms a surface protection that makes it impermeable to water and resistant to some chemical substances.** Light, strong and resistant by nature, it is the main ingredient in the manufacturing of numberless kinds of products. Aluminum, be it raw or lacquered, is **eco-friendly** and does not require any special kind of maintenance. Thanks to its intrinsic properties and versatility, aluminum is particularly used in the technical furnishing sector (offices, shops, public places), including demountable glass and solid partitions, dividing walls and storage partitions. Aluminum can be anodized, lacquered in millions of colors with the most varied finish effects to satisfy even the most demanding designers! **Our range includes finishes that can be anodized, opaque, glossy, extra glossy, metallized, textured, wood and Corten steel effects.**

RAL PAINT COLORS

GLOSSY Effect
OPAQUE Effect

ANODIZED - Anodized aluminum is pretreated with anodization, a process that creates a layer of artificial oxide on the metal. In substance, oxide covers the aluminum surface making it more weather resistant and not only.

BUMP - It's a rough finish with a "hammered" look which creates different light and dark nuances of the color applied.

PAINTED - Aluminum naturally forms a thin layer of aluminum oxide on its surface that turns to be a perfect substrate for the paint to adhere and be easily removed. Lots of glossy and opaque colors at the same price chosen from the RAL color chart. RAL is a European color matching system used to define colors for paint, coatings and plastics.

WOOD - SUBLIMATION WOOD EFFECT
This type of finish gives aluminum an aesthetic look very similar to wood. It's a complex process called sublimation that repeats colors and veins of natural wood essences. Painted metal profiles are wrapped in a pre-printed film and put under vacuum. Profiles are then placed into a high-temperature furnace where the pattern printed on the film is transferred onto the metal surface.

Oxidized

A-C005 *
Steel

CORTEN STEEL EFFECT
This finish confers the look of real natural Corten steel on profiles. Its peculiarity is its natural oxidation when in contact with air. Once oxidation has occurred it stops and forms a protective layer that doesn't vary over time.
